Product Overview:

Data (Jun. 2018)	HUD101 TE – HUD101 Test Station

The HUD101 Test Station is a laboratory test system for Head Up Display-101 an electro-optical device that projects attack, navigation and landing information through dedicated symbology, into the pilot's forward field of view.

The HUD101 Test Station generates the stimuli and verifies the responses so as to perform a complete automatic test of the functionality of two HUD101 devices simultaneously.

The software interface has been developed to manage both test activities and burn-in activities in the climatic chamber, generating specific reports in which any failures are collected.
