PSU – Power Supply Unit

The Power Supply Unit (PSU) is a rugged naval system designed to providing a 360V/35A (12.5kVA) supply voltage starting from a 3PH 440V 60Hz.

The unit is monitored in every parameter by an internal control board that interfaces, via ethernet LAN, with the upper unit so as to communicate the operating status instant by instant.

Qualified MIL-STD-810G and MIL-STD-461F the PSU is suitable for applications that require a reliable power supply in a military environment (Naval Sheltered).

Compliance with REACH, ROHS and CE markings.
