PHS – Power Harness System

In addition to the subcontracting services that Proser carries out, there is the design and production of system wiring.

After the design and prototyping phase, we proceed to the production using the harness system in order to faithfully reproduce the characteristics on the production units.

As an example, the images show the creation of an internal wiring for a 3PH 400V 50Hz 60A power system with a second continuous 24Vdc 90A power supply.

After being installed in the system, the wiring passed all the humidity, salt spray, fungus, vibration and shock tests according to the MIL-STD9810G standard.
